

## **Digital Protect insurance: description of insurance needs**

### **Digital Protect description**

Digital Protect insurance offers cover for mobile devices (such as your mobile, smartphone, tablet, laptop, digital camera, portable sat-nav):

- up to 5 years old;
- for the entire family (you, your cohabiting partner and your dependent children);

against the risk of:

- material damage beyond your control;
- theft with aggression or breaking and entering a property that is not your home (your main residence, holiday home or temporary rental home);
- fraudulent telephone communication with your mobile after such a theft.

### **Insurance needs:**

Your portable mobile devices face a number of risks due to their use and the ease with which they can be taken away.

Every family has many mobile devices that are often taken outside the home, where they are anything but safe. The devices themselves are easy to replace, but this often requires a considerable investment, so their loss or damage can have a serious financial impact as well.

If you and your family have several mobile devices you wish to insure against the risk of theft with breaking and entering or aggression at a property that is not your home, or against accidental material damage (beyond your control), you need an insurance covering all the family's (insurable) mobile devices against these risks.

If you wish to cover these risks, Digital Protect is what you need.

By signing the terms and conditions of entry, the person taking out the insurance policy declares that:

- the content of the proposed insurance product meets their needs and requirements;
- they are sufficiently informed of the scope and limitations of this product;
- they are taking out this insurance voluntarily without obligation.

We would like to draw your attention to the fact that this insurance can only be taken out if the person taking out the insurance meets the terms and conditions of entry.
